Funding for the creation of research networks, called COST Actions

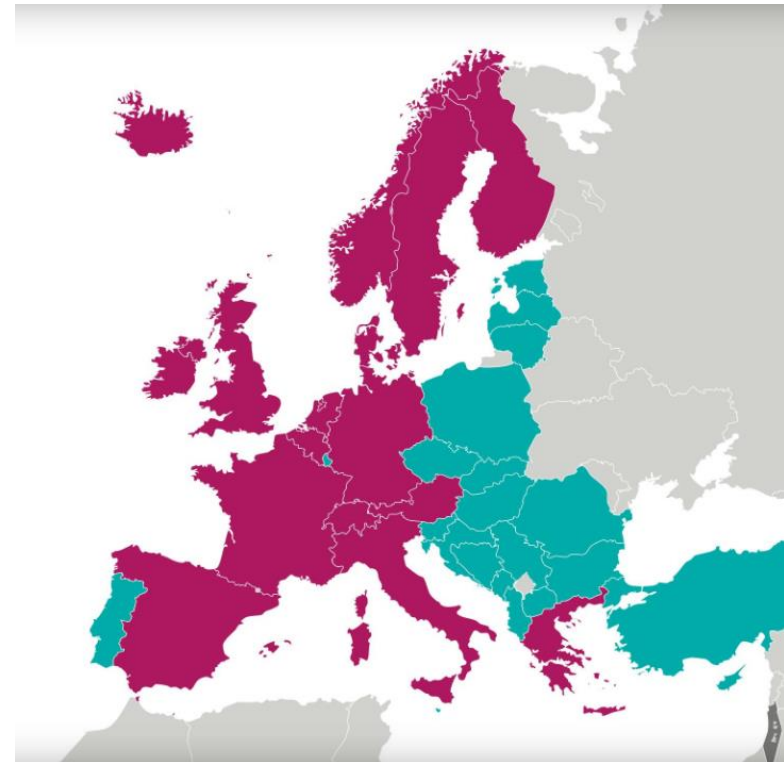

Collaboration among scientists across Europe and beyond (37 member countries)

EU funded COST Actions are interdisciplinary and open.

Funding for 3-4 years

Involving different stakeholders:

- universities,
- R&D,
- private sector,
- policymakers,
- civil society.

Goal:

Free and accessible **modelling standard for representing the integrated energy chain in a city**; from generation and transformation, through distribution and down to consumption. A general modelling approach in order to enable **interoperability and exchange possibilities between the different stakeholders, tools and expert fields.**

Increase spatial data usage for energy applications in cities planning, modeling, simulation, maintenance, administration.

Both detailed single-building simulations and city-wide assessments. The design and validation of domain extensions for **CityGML** will be based on the current development of the **CityGML Energy ADE** and the **Utility Networks ADE**.

1. **Digitalization processes of the built environment** is definitely a hot topic after the crisis in the European construction sector between 2009 - 2014, therefore the research questions in the proposal are very challenging and in time.
2. The **CityGML** industrial standard is **promising and respectable** development.
3. **Link Energy ADE <<-->> UtilityNetwork ADE** is **useful** contribution.

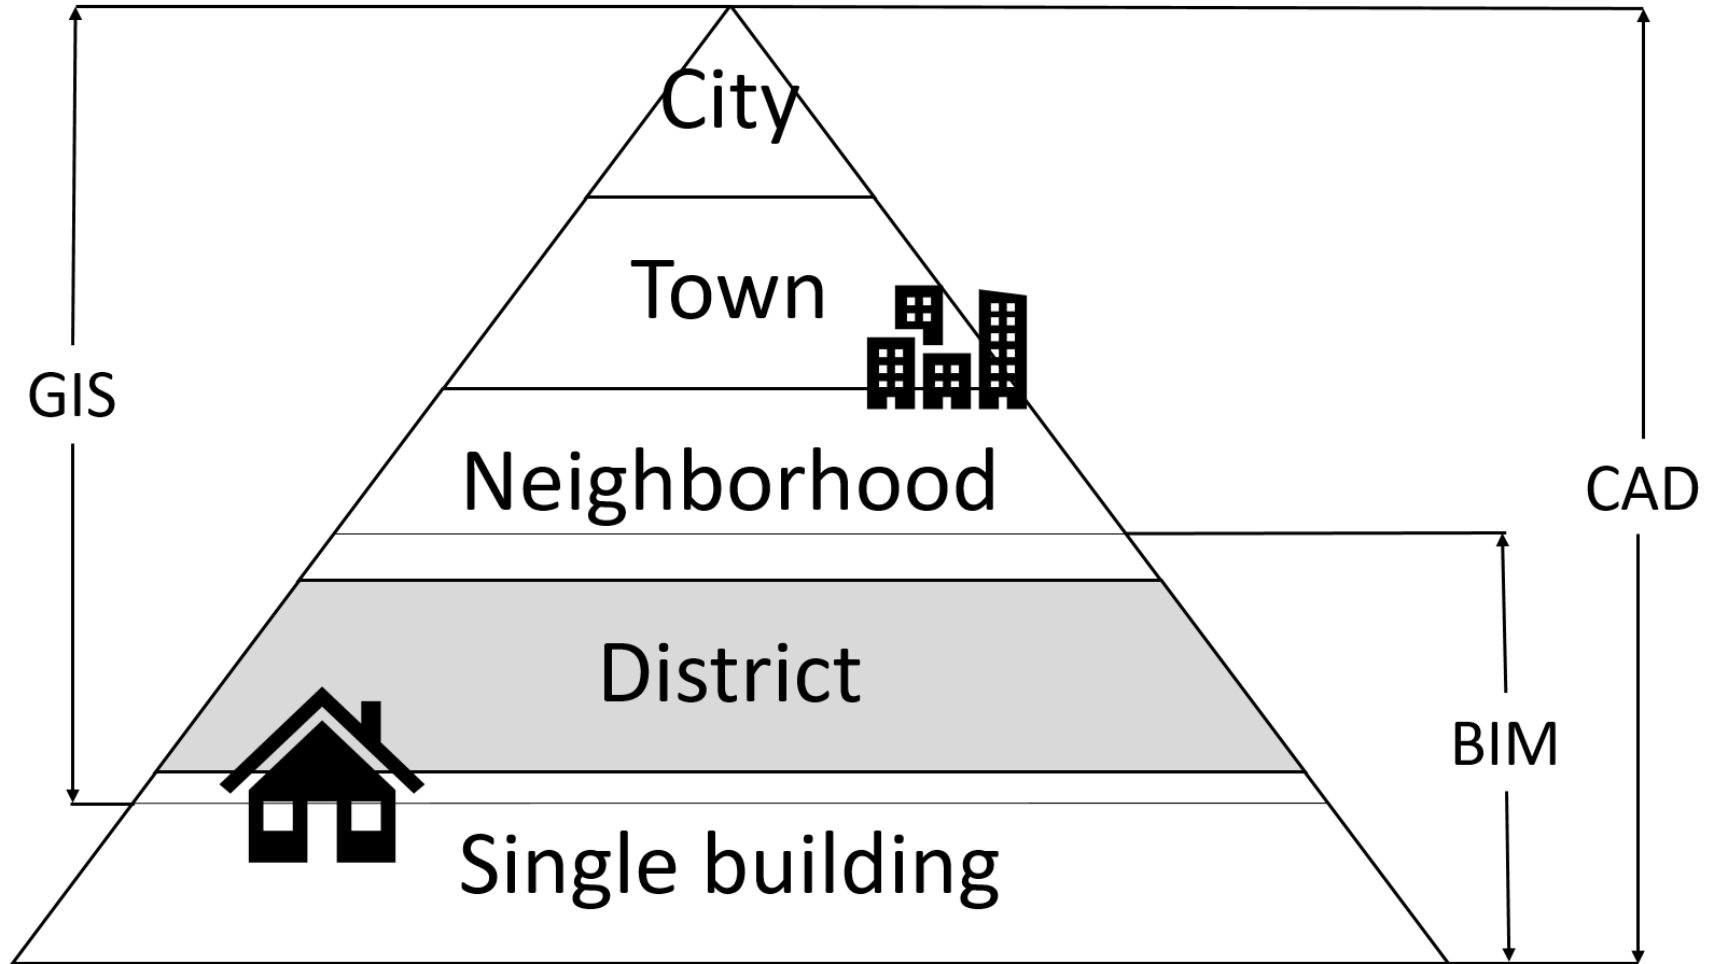

1. The **need to build a community addressing the problem of urban data modelling** for energy applications; such community can be active and have a strong impact on the more and more frequent applications related to **smart cities**, providing common data models.
2. **SUMERA can solve socio-economic problems** related to **better urbanization and better energy management and infrastructure planning**.
3. **Software development** entities with experience that will develop and support the standard

SUMERA strengths: Interoperability

EIFER

1. **Clarify scientific, technological and/or socio-economic impact**
2. **Integrate more BIM** (Building Information Modeling) and its parts (e.g. Industry Foundation Classes - IFC) is an official ISO and CEN standard but is only mentioned once in the proposal. BIM and its corresponding LOD level should be considered much more seriously in the proposal. Specifically: integrate **sensor data flow via IfC** (IfcSensor, IfcFlowTerminal etc.)
3. **Incorporate important specifications** like the **LandXML**, which models land and infrastructure (e.g. roads).

1. Clearly **define extensions to Energy ADE and Utility Network ADE** for linking the two extensions.
2. Identify and add to consortium **software exploitation entities**, support the standard (OGC, CEN)
3. Propose means/approaches for **integrating other (inter)national standards with international standards e.g. CIM to UtilityNetwork ADE**

Build up a new coalition of the willing around the ADEs consortiums

**Deadline:
5 September 2019**

Thank you...
